

REX DATA GOVERNANCE PROJECT

GRANDE ASSURANCE QUEBECOISE - Montréal

PROJECT ENVIRONMENT

Main Directorate of Data Governance

OBJECTIVE OF OUR SUPPORT

Design and deployment of cross-functional initiatives aimed at the proper management of data within the organization, ensuring adherence to best practices in collaboration with IT, compliance, security, legal, and business function leaders. The goal is to raise awareness and promote responsible data use, making it a strategic asset that will support the ambitions of the new organization formed from the merger of several entities.

EXECUTION OF THE SUPPORT

- Designing the deployment strategy for initiatives aimed at proper data management and the strategy for the deployment of frameworks, including participation in the drafting and operationalization of these frameworks;
- Advising the stewardship network on implementing best practices in data management and the operationalization of frameworks (“Data by design”);
- Defining and supporting the data governance strategy and the protection of personal information, including information security projects, risk management, and advanced analytics;
- Implementing risk indicators to ensure monitoring and support the reporting of the Chief Data and Analytics Officer and the Senior Director of Data Governance;
- Representing the main directorate of data governance in various governance committees;
- Supporting best practices in data processes, data tooling, data inventory, data catalog, data profiling, and data quality.

PROJECT ENVIRONMENT

- Long-term project spanning several years since 2020.
- Multiple scopes with teams of 10 to 15 people.
- Team profiles include: Data Scientist, Data Analyst, Data Ops, MLOps, Data Engineer, Data Governance Advisor, Developers, Data Project Managers.
